## Press Release

### Spille Builders has built the first certified **Green Build Kentucky** home in Northern Kentucky.

Spille Builders, a fourth generation local home builder, has built the first home in Northern Kentucky that is certified under the Green Build KY program. This is the third certified home in the Commonwealth, located in the Freedom Park community of Independence, Kenton County. In January 2009, this home received its final inspection, by a third party, to verify its certification compliance for the National Energy Star and the Green Build KY programs.

**Green Build KY** is a program which encompasses many aspects of a new home. This makes the home more energy efficient as well as more comfortable to live in. The home occupants will feel the difference and know they are doing their part to conserve the environment. Aspects involved are lot design, resource efficiency, energy efficiency, water efficiency, indoor environment, homeowner education and the overall global impact of the home. The home must undergo inspections by a third party verifier to ensure its compliance under the program's strict standards. This home is listed on the **Green Build KY** web site. To learn more about this program and the national Energy Star program visit our website at [www.spillebuilders.com](http://www.spillebuilders.com).

Today's home building is dynamic; technology improves the way we build and how we live in our homes. Spille Builders has always had a passion for protecting and conserving our natural resources. In keeping with our commitment to the environment, our team has sought training and achieved certifications concerning energy savings and environmental conservation. Tom Spille has completed the NAHB's **Certified Green Professional (CGP)** course and Bernadette Spille is a NAR **Realtor GREEN**. We didn't stop there; we made a commitment to build all of our homes **ENERGY STAR** Certified. Spille Builders is an Energy Star Partner. We also use **GREEN BUILD KY** techniques in every home; we've used these techniques for over 50 years, before "GREEN" was the new catch phrase.

In our homes, we have used Dual Fuel and Geothermal systems along with many other energy saving features as you can see, we don't just *talk GREEN, we BUILD GREEN.*
